# FQ2 Smart Camera

The New Standard for Image Inspection

» Advanced inspection in a compact housing
 » Expanded performance and functionality
 » Camera, Communications, Software Tools, and Much More

realizing

# Introducing the Smart Heavyweight

Missing Pill

2 Misalignment

Package Insert Detection

### Three Improvements for an effective Machine Design

Compact Body

### All in one Vision Sensor

All-in-one compact size that is perfect for use in tight spaces or as an aftermarket option.

Compared to more-advanced Vision Sensors with multiple components, this Sensor boasts a much more efficient hardware design.

» p.04

Extended Functions

### Image Sensor, OCR, and Code Reader in One

The OCR function, with a "build-in" dictionary and the Code Reading, ability to recognize 15 codes types add to the solution and provide a powerful upgrade !

 Image Inspections
 OCR
 Code Reader
 P.06

## **Diverse** Lineup

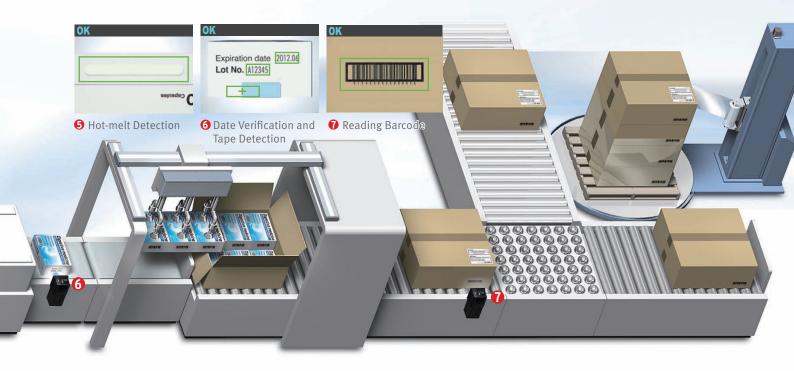

### A Lineup That Fits a Wide Range of Equipment

Expanded inspection menu, camera variations, and communication interfaces with the same pricing level as our previous FQ Series.

With a wide range of sensors, an option for every application now becomes a standard option.

» p.12

## Compact

# All You Need is One

## All You Need in One Package

### **Image Processor**

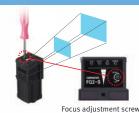

Although previous Vision Sensors placed the image processor in a separate Controller, now we have built the processor into the camera unit.

### High-power Lighting

The Sensor includes high-power lighting capable of evenly lighting across a wide field of view. This provides sufficient lighting even when the enclosed polarizing filter is used.

### Adjustable lens

The focus of the lens can be adjusted to take clear images for the specific field of view and installation distance you need.

### I/O Power Supply Connector

The external output line for inspection results, the input line for changing the setup, and the power supply line are all combined into one connector.

### **Ethernet Connector**

Commands can be input from a PLC to control the FQ2, and inspection results and measurement results can be output from the FQ2 to a PLC. You can also transfer images to a computer.

### **IP67 Water Resistance**

The sensor can be used in wet environments.

### **Flexible Cables**

All cables from the camera are flexible. This allows the Sensor to be used safely on moving parts.

#### Smart Click Connectors

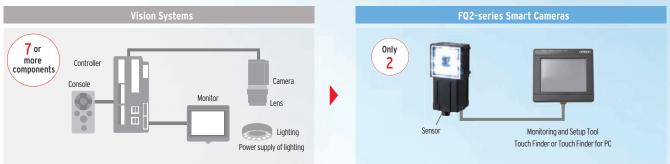

Connection is made quick and easy with a clear, definitive click-into-place mechanism.

## Quick and Easy Design and Installation

### **Easy Product Selection**

All you need to do is select the camera based on the field of view and installation distance that you require. There is no need to select and purchase additional lighting or lenses. Furthermore, the time required to wire everything has been drastically reduced due to the low number of components.

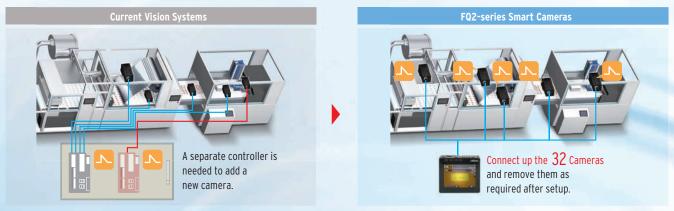

### **Easy Installation**

The camera and lighting have been integrated into a single unit, so only one camera mounting bracket is required. The Sensor comes with a multi-directional mounting bracket that can be attached on any of the four sides of the Camera. Axis alignment is also not required because the lighting and the camera are integrated into a single unit.

### Easy Expansion Up to 32 Cameras

Just install the Cameras where you need them. No control panels are required to house the controllers. Triggers can be input for each Camera, so new Cameras can be added whenever required without having to worry about timing input design. Up to 32 Cameras can be set up from a single Touch Finder, so you do not need to worry about adding new monitors when you need more Cameras. This also allows you to smoothly respond to user requests for additional features.

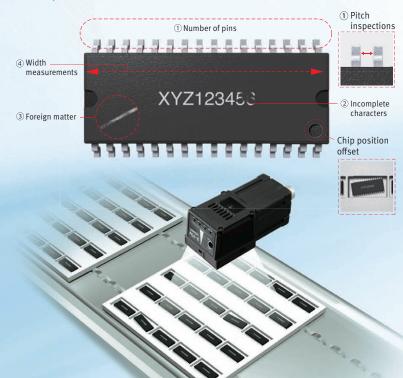

**Extended Functions : Image Inspections** 

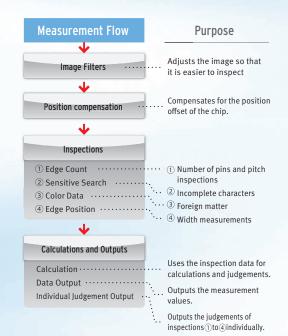

# **Easily Perform Both Inspection and Positioning**

You can combine multiple inspection items to perform external inspections, positioning, and other tasks all from a single Sensor.

## **External Inspection**

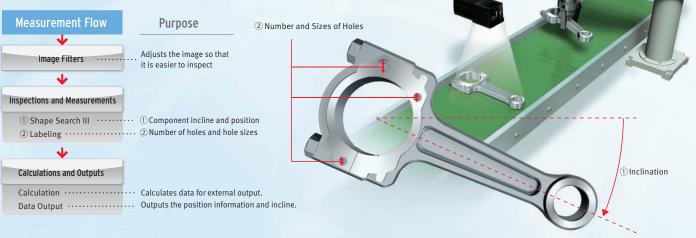

External inspection of ICs can be completed with a single Sensor. The position offset of the entire pallet before inspection can be adjusted on the image itself, which reduces the amount of work required to increase mechanical positioning accuracy.

## **Component Positioning**

The Sensor can measure angles of rotation and other position information, so it can also be used for positioning. Inspections can also be performed for the number and size of holes along with the position information.

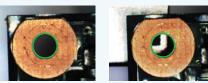

## Incorporating the Best-selling Inspection Items from High-end Vision Systems

#### Searching

### Shape Search III

The FQ2 now has Shape Search III that uses OMRON's unique techniques to search and match registered models at high speed. Shape Search III provides advanced robustness, which is critical on FA sites. High-precision and reliable position detection is possible without being affected by light interference and backgrounds.

The target object can be detected precisely even with the background.

#### Searching

#### Search

This is a standard search inspection item. This type of search is used to detect items like labels, identify shapes, or positions.

Detection of Promotional Stickers

## The model image can be automatically

Sensitive Search

divided into small areas, so that tiny differences that cannot be detected with a normal search can be detected with large numerical differences.

### Labeling

This inspection item counts how many labels there are of the specified color and size and measures the area or center position of the specified label.

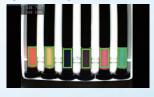

#### Area

This inspection item measures the area and center position of the specified color.

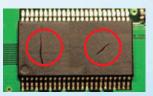

### **Color Data**

Inspections can be performed that compare the difference in color between the workpiece and a registered image of a good product to detect objects and foreign matter.(average color value)

You can also inspect for defects and foreign matter by looking at the color deviation.(color deviation)

### **Utility Items**

### 360° Rotational Position Compensation

The correct position of workpieces with an inconsistent orientation can be measured through automatic detection of the offset of the workpiece in relation to a registered standard model.

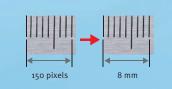

### **Image Filters**

A total of 11 different image filters are provided, including background suppression to help eliminate patterns that can result in unstable measurements, as well as dilation and erosion.

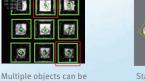

### Calibration

If the dimensions or position of a workpiece is difficult to determine in a pixel display, you can convert the display unit so that it is easier to see.

7

Stable 360° searching is possible even if detected simultaneously even objects are overlapped or partially hidden. with different amounts of light.

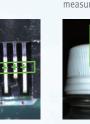

## **Edge Width**

This inspection item measures the width between edges.

This inspection item detects Edges and measures their positions.

**Edge Position** 

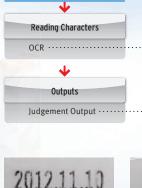

# The number of edges in a region can be counted.

## Extended Functions : OCR

## **New OCR Method to Quickly Read Characters** without Dictionary Registration Think

## **Date Verification**

Even if printing is distorted or unclear due to conveyor line conditions, a unique reading method with a built-in dictionary enables stable reading of characters.

**Measurement Flow** 

Worn Characters

Previous Vision Sensor

100

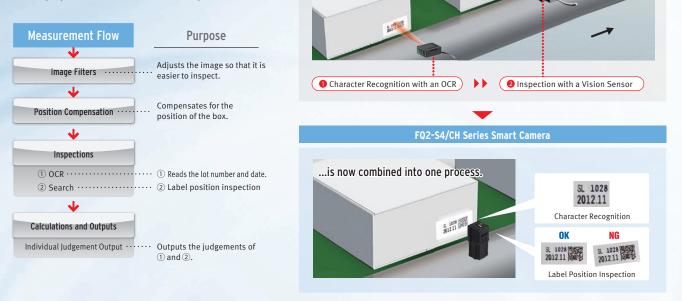

Purpose

① Reading characters ② Verification against

reference data

## **Character Recognition and Label Position Inspection**

Although previously performed as separate processes, character recognition and inspection tools can now both be performed with a single FQ2 Sensor. This helps you reduce costs and save space.

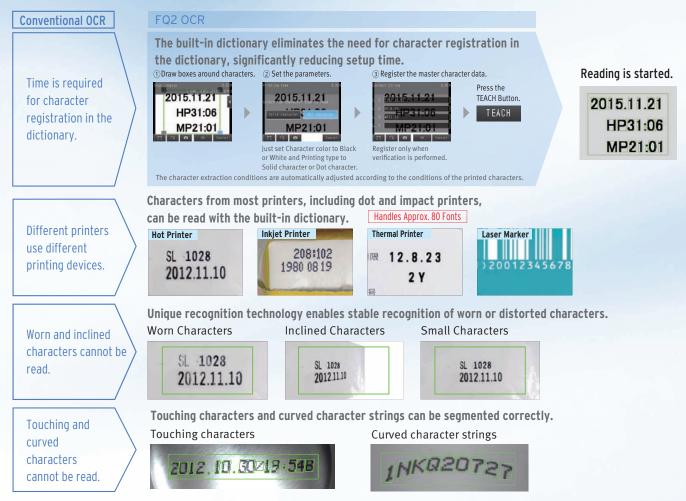

What was two processes....

### **OCR with Built-in Dictionary**

### OCR

The large amount of data in the built-in dictionary contains approximately 80 different fonts that are used on FA sites. Variations for worn characters, blurring, distortion, different backgrounds, and size changes have been included to enable stable and highly accurate reading with the built-in dictionary even for some variations in the characters. It is not necessary to set parameters to compensate for character contrast or positional offsetting.

### **Utilities That Make Daily Operation Easier**

### Verification

The character data being read can be verified against the character data registered in the master data. You can register up to 32 character strings in the master data and easily change the current master data with an external signal. With the FQ2-S4, you can also compare against the character strings read from bar codes or 2D codes.

The calendar function eliminates the need to set the date and best-before date manually every day. You can also set the dates

according to the dates set to the printer by

using the command sent from the external

system in addition to from the Touch Finder

Calendar Function

for the FO<sub>2</sub>.

#### Buster data 0 ELLOO A Buster data 1 20211 2 Matter data 2 28 9 Matter data 2 28 1 Matter data 4 70-110 8 Matter data 5 10/2033.0 1 1 C 6

### Registration in Model Dictionary

Non conventional characters can be added to the dictionary. Special fonts are difficult to read with the default settings, but add them to the dictionary and the FQ2 provides reliable readings.

### Logging Images and Reading Data

The inspected images and reading results can be temporarily saved in the sensor. Additionally, up to 10,000 images and 10,000,000 reading results can be saved in a 4-GB SD card. You can select logging both OK and NG results or only NG results to aid in traceability.

### Boundary Correction

Dark areas around characters, such as bar codes, are removed to achieve stable reading.

### **Expanded Functions : Code Reader**

# Read Any of 15 Types of Codes from Paper Labels to Direct Marking

OCR and Code Reading inspection items can be combined to read codes and verify them against character strings all within the FQ2. No programming of external devices is required.

Reading

Outputs

Data ·····

Bar code ······ ① Reads the barcode.
 OCR ····· ② Reads the character string

Purpose

and verifies it against the barcode in 1.

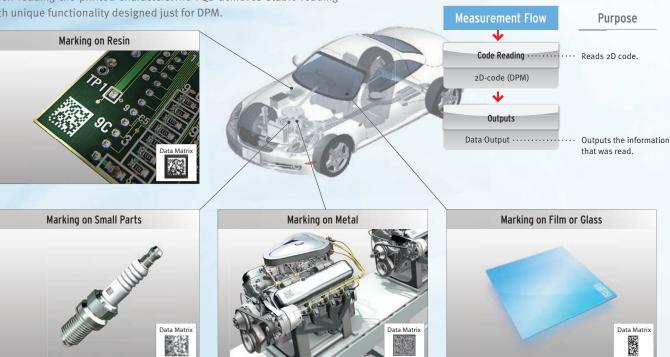

Compensates for the position of the box.

Outputs the verified

character string.

## **Reading Direct Marking Codes**

It has become common to manage information by directly marking codes on products. However, differences in materials often causes instability when reading the printed characters. The FQ2 achieves stable reading with unique functionality designed just for DPM.

### • Print Quality Grading Function

The function to evaluate the quality of a 2D code (DataMatrix) enables an in-line check of the relative quality change and the parameter where the change occurred.

[Applicable standards]	ISO/IEC TR 29158 (AIM DPM-1-2006)
[Applicable code]	DataMatrix ECC200

Note This function evaluates relative change in code guality and does not give absolute grading The FQ2-S4 with sensor version 2.20 or later provides this function.

### Types of Filtering

You can apply up to three of the four unique filters developed by OMRON in the desired order to remove printing irregularities and noise, in order to achieve a stable reading.

Smooth	Smooths the image.
Dilate	For white codes, increases the cell size. Effective for reading codes with cell spreading.
Erosion	For white codes, reduces the cell size. Effective for reading separated dot codes.
Median	Removes noise.

**Combining Filtering** 

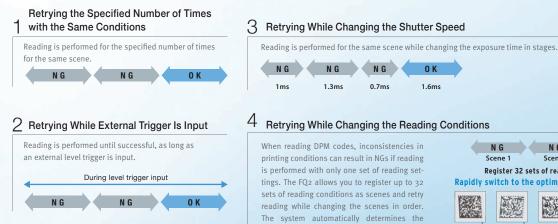

0 K

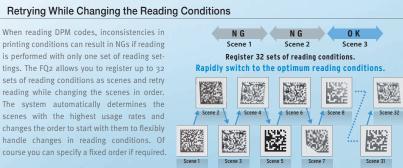

Erosion and dilation can be combined to connect dots without changing the dot thickness.

### Retry function

Code Readers must be able to read codes even for poor printing conditions. You can automatically retry reading while changing the exposure time and other reading conditions, even for changing workpieces or environments, to enable a stable reading.

· QR code is the registered trademark of DENSO WAVE.

Versatile

# A Lineup That Fits a Wide Range of Equipment

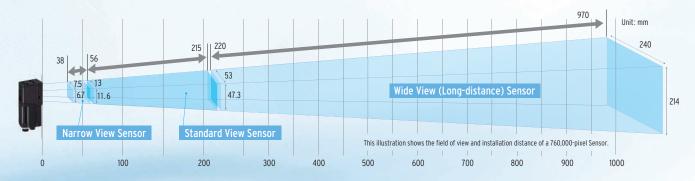

## Sensor

We offer a diverse lineup of Sensors so that you can choose the one with the perfect field of view and installation distance for your needs.

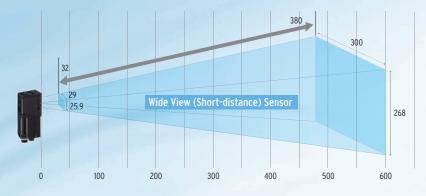

### • Seamless Field of View Variations

All-in-one Sensors tend to be limited in field of view variations, but we offer a lineup ranging from 7.5 mm up to 240 mm to meet your needs.

### Wide View Sensors -- Perfect for Tight Spaces

A side-view wide-angle camera takes images and performs inspections across a wide area, even if the camera is close to the workpiece. Perfect for mounting the sensor in locations with limited space. This also enables the Sensor to be installed alongside an assembly line without protruding in order to perform inspections from the side of the conveyor belt.

 Inspection for Presence of Markings Inside a

 Vertical Form-fill-sealing Machine

 Image: sealing machine

 <

Sensors with C-mount lens

Color Monochrome

The Sensors with C-mount lens enable freedom of lens selection for long distances over 1 m and narrow fields of view under 1 mm that are not covered by our integrated Sensors. This type of Sensor is also useful when you want to use external illumination.

Note: A commercially available telecentric lens is required for narrow field of view applications.

## Lighting Examples

Backlighting

External Shape Inspections

Low-angle Lighting

1000

Defect and Foreign Matter Inspections

## **Communication Interfaces**

The Sensor includes communication interfaces for compatibility with a wide range of host devices. This helps reduce the design work required for data

communications between the Sensor and a PLC.

**Compatible Models** 

**Compatible Models** 

**Compatible Models** 

Inputs: 7

Outputs: 3

FQ-WU Sensor Data Unit Cable

FQ-WU Sensor Data Unit Cable

### PLC Link

PLC link greatly reduces the amount of time and work that is required to create ladder programs.

### FINS

OMRON's exclusive FINS/TCP communications interface can be used to connect to low-cost OMRON PLCs. With this communications interface, no communications controls are required to process the sending and receiving of complex TCP packets. You get faster, simpler connections to OMRON PLCs.

### EtherNet/IP™

EtherNet/IP<sup>TM</sup> communications, a standard widely used in communications systems in factories around the world, is also supported. This communication interface enables simple and easy connections to a wide range of EtherNet/IP<sup>TM</sup> devices, including OMRON PLCs.

#### I/O Expansion Units

Our expansion units enable expansion to up to three times the number of I/O connections. This enables the output of individual judgement results for each inspection, a feature that has been highly requested.

#### **RS-232C Communications Unit**

This Sensor Data Unit supports standard RS-232C communications.

## **Operation Interfaces**

You can choose the operation interface and monitor size to suit your application.

This is a small monitor with a touch panel. It's durable, rugged design is shock-resistant and portable. It has passed our standard 1.3 m drop test. On-screen messages can be changed between nine different languages: English, Traditional Chinese, Simplified Chinese, Korean, Japanese, German, French, Italian, and Spanish.

The Setup Tool provides the same functions as those on the Touch Finder, but on a PC. In addition, offline simulation can be performed without the need of a sensor. The software can be downloaded for free by any customer with the purchase of a Sensor. Refer to the member registration sheet that is enclosed with the sensor for details. Customizing user interface using .NET controls\* makes the onsite monitor easier to read. You can increase or reduce the size of displayed measurement images and text to meet the demands of onsite operators.

\*.Custom controls to easily display images and results measured by the FQ2 Series on applications created with Microsoft Visual Studio. # Hardware Advancements

## High-speed Image Processor

### 20 Inspection Items per Second Processing Time

With our new high-speed image processor we are able to achieve a processing time of 50 ms or less for all primary inspection items.

\* Processing may take longer than 50 ms depending on the settings.

with no rotational compensation.

## High-brightness ODR Lighting

Four times the brightness of conventional LEDs can be achieved with ODR lighting (Optical Double Reflection) that uses a complete new optics technology. High-brightness illumination was achieved by increasing light efficiency and heat dissipation, making it possible to input images this sharply for the first time.

High-speed

Image Processor

Four Times the Brightness

**3X** Faster than Previous Models

### Crystal Clear Images Even through Polarizing Filter

Lighting is required for stable image inspection, but shiny surfaces can reflect light, resulting in incorrect judgments. You can use a polarizing filter to reduce specular reflection, but the entire image will be darker, which can result in insufficient image contrast. The FQ2 Series is equipped with OMRON's own high-power lighting DR optical system for effective use of LED power. This system provides sufficient lighting for inspection even when the enclosed polarizing filter is used.

### Partial Input with DAP (Dual Axis Partial) Processing

Processing time can be further reduced by limiting the camera input to only the area that is required for inspection. Previous models allowed trimming only in the Y direction, but now you can specify a range across both the X and Y axes for trimming. Keep a wide field of view and trim to only the sections that are required for inspection in each scene to reduce processing time.

[ Problems with a Standard Digital Zoom ] Camera input is performed for all images and only a portion is

shown enlarged, so this does not decrease the amount of time required for camera input.

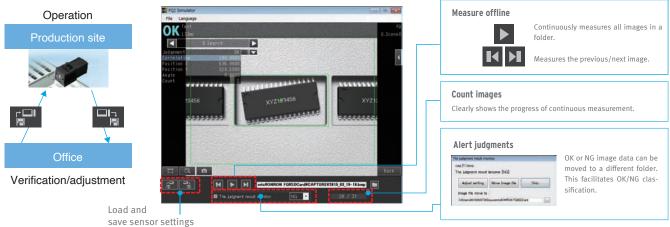

Note: DAP processing is provided only on 760,000-pixel and 1,300,000-pixel Sensors.

Partial input allows you to input only the portion of You can enlarge the an image that is required for inspection by changing display of the partial Partial Input Y scenes, without having to change the field of view. input image. Field of OMRON View Y Partial Input X Field of View X Workpiece B OMRON

# **Useful Onsite Utilities**

### **Simulation Software**

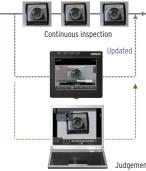

Without connecting the FQ2 Sensor, TouchFinder for PC, setup software that runs on a PC, enables offline adjustment of inspection conditions and measurement simulation using logging images. You can verify and adjust from a remote location to increase yields in overseas factories.

Note. If you register as a member after purchasing a Sensor, you can download TouchFinder for PC for free. Refer to the member registration sheet for details.

### **Real-time Threshold Adjustment**

The FQ2 smart camera allows fast and easy real-time parameter adjustment. Eliminating the need to stop the machine for fine tuning and optimisation of settings, resulting in zero machine downtime.

Parameter adjustment on Touch Finder Fine-tuning can be done on the production site.Judgment parameters can be smoothly changed without interrupting inspection.

Adjustment on TouchFinder for PC Histograms allow you to check the distribution of values measured using logging images to verify the best judgment parameters. After adjustment, the judgment parameters can be reflected in the Sensor as smoothly as using the Touch Finder.

Judgement conditions can be adjusted on the Touch Finder.

### **Auto Detection**

When multiple sensors are connected to the touch finder, the display automatically switches to the image of the sensor which has produced an NG result. This allows dynamic visualisation of reject conditions.

Automatically NG sensor image is displayed !

Inspection History Logging

Historical results logging is very useful for testing a new line. Samples are fed down the line and inspection results are logged. The logged data can be checked on a time scale in graph form and used to adjust judgement conditions. File Logging is convenient during operation. Large inspection history can be saved on SD cards and used later for traceability.

File Logging

SD card Up to 10 million measurement values or more (for a 4-GB SD card) Up to 10,000 images or more (for a 4-GB SD card)

Displays the most recent 1,000 inspection results in graph form.

### Shortcuts

Shortcuts to Setup Menu items that are changed frequently can be added to the Run Mode display.

This enables the user to quickly perform adjustments when a problem occurs during operation.

Directly access frequently used functions.

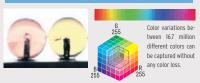

Note. When 32 sensors are connected, the most recent NG sensor of 8 sensors selected for display is displayed.

# **Key Technologies**

### **Real-color Sensing**

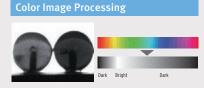

Real-color processing is an image processing technology that performs high-speed processing of full-color images with a total of 16.7 million colors (256 tones per RGB channel). This means that image processing can be performed with the same color information that is visible to the human eye, and stable measurements can be performed under lighting that closely resembles natural light.

#### Real color image processing

The camera image is processed as-is without any loss of quality.

This enables even the slightest of color differences to be captured with high accuracy.

Captured images are converted to a 256-shade monochrome image and processed. This enables more stable inspection compared to binary level processing, but slight changes in color cannot be detected with this method. Binary image processing

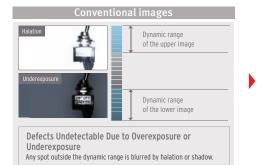

Captured images are converted to a black and white two-color image and processed. This reduces the amount of data and enables high-speed processing.

### Previous Image Proces

#### OMRON FQ2 Series

High dynamic range minimizes the effects of lighting such as halation and allows highly precise inspections.

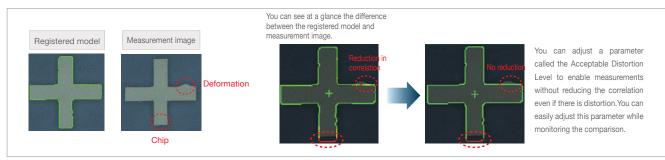

Defects Detectable Even on Reflective or Shadowy Surfaces The surface of the workpiece is accurately reproduced and detected even with overexposure or underexposure.

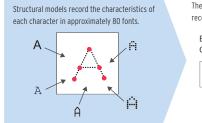

### Shape Search III (Same functionality included in high-end sensors) | Patent Pending

With Shape Search III, you can visualize comparisons between the registered model data the measurement object to easily see when comparisons are not optimally matched. Visualization of the comparison levels provide the guide for parameter adjustment for acceptable variation and distortion levels to quickly obtain the best performance. This can save you a lot of time and effort that were previously required.

### New OCR Algorithm: Matching with Structural Models

Even in cases like the following one, where character registration is required for image matching methods, no character registration is required to read the characters with this new method, which matches structural models of characteristic points.

The position and structure of characteristic points are used to recognize characters.

Size and Font Changes

Worn Characters

Inclined

#### **Extension Tubes**

3Z4S-LE SV-EXR
Set of 7 tubes
(40 mm, 20 mm,10 mm, 5 mm,
2.0 mm,1.0 mm, and 0.5 mm)
Maximum outer diameter: 30 mm dia.

\* Do not use the 0.5-mm, 1.0-mm, and 2.0-mm Extension Tubes attached to each other. Since these ExtensionTubes are placed over the threaded section of the Lens or other Extension Tube, the connection may loosen when more than one 0.5-mm, 1.0- mm or 2.0-mm Extension Tube are used together.

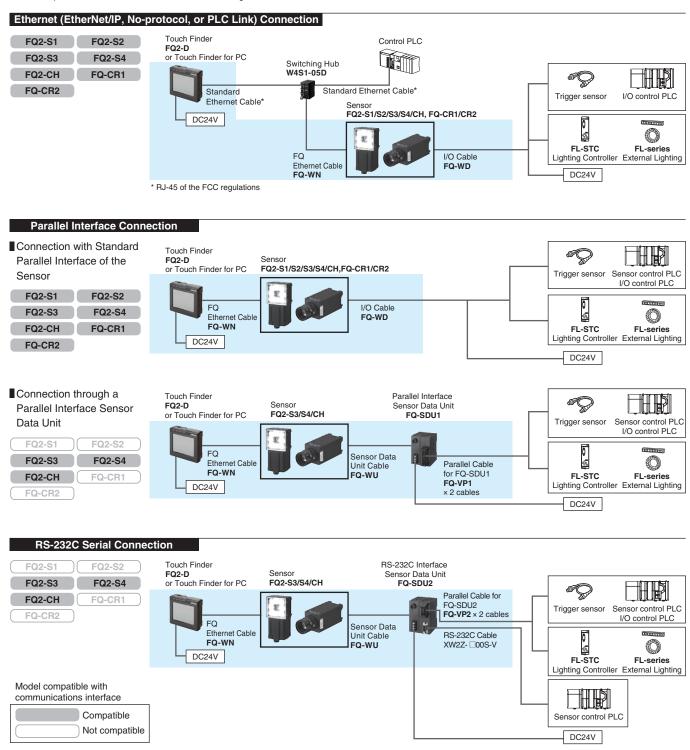

\* Reinforcement is required to protect against vibration when Extension Tubes exceeding 30 mm are used. Up to 32 Sensors can be set up and monitored from a single Touch Finder or Touch Finder for PC. Various types of Sensors can be used at the same time.

However, I/O type and wiring method vary depending on the Sensor, so select the necessary devices.

\*The Setup Tool can connect to up to 32 Sensors and it can display up to eight Sensors at the same time.

Note: Note: If you register as a member after purchasing a Sensor, you can download free setup software Touch Finder for PC that runs on a PC and can be used in place of Touch Finder. Refer to the member registration sheet for details.

### **Touch Finder**

		Туре	Model with DC power supply
Item	Model		FQ2-D30
Number of connectable Sensor		sor	Number of sensors that can be recognized (switched): 32 max. number or sensor that can displayed on monitor: 8 max.
	Types of measurement displays		Last result display, Last NG display, trend monitor, histograms
Main functions	Types of display images		Through, frozen, zoom-in, and zoom-out images
Main ranctions	Data logging		Measurement results, measured images
	Menu language		English, German, French, Italian, Spanish, Traditional Chinese, Simplified Chinese, Korean, Japanese
		Display device	3.5-inch TFT color LCD
	LCD	Pixels	320×240
Indications		Display colors	16.7 million
malcations		Life expectancy *1	50,000 hours at 25°C
	Backlight	Brightness adjustment	Provided
		Screen saver	Provided
Operation	Touch	Method	Resistance film
interface	screen	Life expectancy *2	1,000,000 touch operations
External	Ethernet		100BASE-TX/10BASE-T
interface	SD card		SDHC-compliant, Class 4 or higher recommended
Deffect	Power supply voltage		DC power connection:21.6 to 26.4 VDC (including ripple)
Ratings	Continuous operation on Battery *3		
	Power consumption		DC power connection: 0.2 A max.
	Ambient temperature range		Operating: 0 to 50°C Storage: -25 to 65°C (with no icing or condensation)
	Ambient humidity range		Operating and storage: 35% to 85% (with no condensation)
Environmental	Ambient atmosphere		No corrosive gas
immunity	Vibration resistance (destruction)		10 to 150 Hz, single amplitude: 0.35 mm, X/Y/Z directions 8 min each, 10 times
	Shock resistance (destruction)		150 m/s <sup>2</sup> 3 times each in 6 direction (up, down, right, left, forward, and backward)
	Degree of protection		IEC 60529 IP20 (when SD card cover, connector cap, or harness is attached)
Weight			Approx. 270 g (without Battery and hand strap attached)
Materials			Case: ABS
Accessories included with Touch Finder		ouch Finder	Touch Pen (FQ-XT), Instruction Manual

\*1. This is a guideline for the time required for the brightness to diminish to half the initial brightness at room temperature and humidity. The life of the backlight is greatly affected by the ambient temperature and humidity and will be shorter at lower or higher temperatures.
\*2. This value is only a guideline. No guarantee is implied. The value will be affected by operating conditions.
\*3. This value is only a guideline. No guarantee is implied. The value will be affected by the operating environment and operating conditions.

## Sensor Data Units (FQ2-S3/S4/CH only)

Item			Parallel Interface	RS-232C Interface	
Model	NPN		FQ-SDU10	FQ-SDU20	
Wodel	PNP		FQ-SDU15	FQ-SDU25	
	Parallel I/O	Connector 1	16 outputs (D0 to D15)	6 inputs (IN0 to IN5)	
I/O specifications		Connector 2	11 inputs (TRIG, RESET, IN0 to IN7, and DSA) 8 outputs (GATE, ACK, RUN, BUSY, OR, ERROR, STGOUT, and SHTOUT)	2 inputs (TRIG and RESET) 7 outputs (ACK, RUN, BUSY, OR, ERROR, STGOUT, and SHTOUT)	
specifications	RS-232C			1 channel, 115,200 bps max.	
	Sensor interface		FQ2-S3 connected with FQ-WU       : OMRON interface         *Number of connected Sensors: 1		
	Power supply voltage		21.6 to 26.4 VDC (including ripple)		
	Insulation resistance		Between all DC external terminals and case: 0.5 M $\Omega$ min (at 250 VDC)		
Ratings	Current consumption		2.5 A max. : FQ2-S       and FQ-SDU       FQ2-CH1       -M and FQ-SDU         0.4 A max. : FQ2-S       and FQ-SDU       0.1 A max. : FQ-SDU       only		
	Ambient temperature range		Operating: 0 to 50°C, Storage: -20 to 65°C (with no icing or condensation)		
	Ambient humidity range		Operating and storage: 35% to 85% (with no condensation)		
Environmental	Ambient atmosphere		No corrosive gas		
immunity	Vibration resistance (destruction)		10 to 150 Hz, single amplitude: 0.35 mm, X/Y/Z directions, 8 min each, 10 times		
	Shock resistance (destruction)		150 m/s <sup>2</sup> 3 times each in 6 directions (up, down, right, left, forward, and backward)		
	Degree of protection		IEC 60529 IP20		
Materials			Case: PC + ABS, PC		
Weight			Approx. 150 g		
Accessories included with Sensor Data Unit		Data Unit	Instruction Manual		

## System Requirements for Touch Finder for PC The following Personal Computer system is required to use the software.

os	Microsoft Windows 7 Home Premium or higher (32-bit/64-bit version) Microsoft Windows 8.1 Pro Edition or higher (32-bit/64-bit version) Microsoft Windows 10 Home Edition or higher (32-bit/64-bit version) Microsoft Windows 11 Pro Edition (64-bit version)
CPU	Core 2 Duo 1.06 GHz or the equivalent or higher
RAM	1GB min.
HDD	500 MB min. available space *
Monitor	1,024 × 768 dots min.

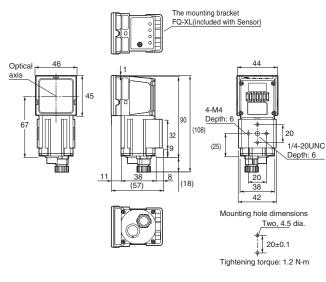

\*. Available space is also required separately for data logging.

#### Meaning of Optical Chart

The X axis of the optical chart shows the field of view (mm) (See Note.), and the Y axis of the optical chart shows the camera installation distance (mm).

Note: The lengths of the fields of view given in the optical charts are the lengths of the Y axis.

### **READ AND UNDERSTAND THIS CATALOG**

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

### WARRANTY

OMRON's exclusive warranty is that the products are free from defects in materials and workmanship for a period of one year (or other period if specified) from date of sale by OMRON.

OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, REGARDING NON-INFRINGEMENT, MERCHANTABILITY, OR FITNESS FOR PARTICULAR PURPOSE OF THE PRODUCTS. ANY BUYER OR USER ACKNOWLEDGES THAT THE BUYER OR USER ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE. OMRON DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED.

### LIMITATIONS OF LIABILITY

OMRON SHALL NOT BE RESPONSIBLE FOR SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, OR STRICT LIABILITY.

In no event shall responsibility of OMRON for any act exceed the individual price of the product on which liability is asserted.

IN NO EVENT SHALL OMRON BE RESPONSIBLE FOR WARRANTY, REPAIR, OR OTHER CLAIMS REGARDING THE PRODUCTS UNLESS OMRON'S ANALYSIS CONFIRMS THAT THE PRODUCTS WERE PROPERLY HANDLED, STORED, INSTALLED, AND MAINTAINED AND NOT SUBJECT TO CONTAMINATION, ABUSE, MISUSE, OR INAPPROPRIATE MODIFICATION OR REPAIR.

### SUITABILITY FOR USE

THE PRODUCTS CONTAINED IN THIS CATALOG ARE NOT SAFETY RATED. THEY ARE NOT DESIGNED OR RATED FOR ENSURING SAFETY OF PERSONS, AND SHOULD NOT BE RELIED UPON AS A SAFETY COMPONENT OR PROTECTIVE DEVICE FOR SUCH PURPOSES. Please refer to separate catalogs for OMRON's safety rated products.

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of products in the customer's application or use of the product.

At the customer's request, OMRON will provide applicable third party certification documents identifying ratings and limitations of use that apply to the products. This information by itself is not sufficient for a complete determination of the suitability of the products in combination with the end product, machine, system, or other application or use.

The following are some examples of applications for which particular attention must be given. This is not intended to be an exhaustive list of all possible uses of the products, nor is it intended to imply that the uses listed may be suitable for the products:

- Outdoor use, uses involving potential chemical contamination or electrical interference, or conditions or uses not described in this document.
- Nuclear energy control systems, combustion systems, railroad systems, aviation systems, medical equipment, amusement machines, vehicles, safety equipment, and installations subject to separate industry or government regulations.
- Systems, machines, and equipment that could present a risk to life or property.

Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

### PERFORMANCE DATA

Performance data given in this document is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of OMRON's test conditions, and the users must correlate it to actual application requirements. Actual performance is subject to the OMRON Warranty and Limitations of Liability.

### **CHANGE IN SPECIFICATIONS**

Product specifications and accessories may be changed at any time based on improvements and other reasons.

It is our practice to change model numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the product may be changed without any notice. When in doubt, special model numbers may be assigned to fix or establish key specifications for your application on your request. Please consult with your OMRON representative at any time to confirm actual specifications of purchased products.

### **DIMENSIONS AND WEIGHTS**

Dimensions and weights are nominal and are not to be used for manufacturing purposes, even when tolerances are shown.

### ERRORS AND OMISSIONS

The information in this document has been carefully checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical, or proofreading errors, or omissions.

### **PROGRAMMABLE PRODUCTS**

OMRON shall not be responsible for the user's programming of a programmable product, or any consequence thereof.

### **COPYRIGHT AND COPY PERMISSION**

This document shall not be copied for sales or promotions without permission.

This document is protected by copyright and is intended solely for use in conjunction with the product. Please notify us before copying or reproducing this document in any manner, for any other purpose. If copying or transmitting this document to another, please copy or transmit it in its entirety.

## **Vision Series Lineup**

The lineup covers everything from cost-effective Smart Cameras to ultra-high-speed Vision Systems. Choose the best combination for your budget and needs.

Note: Refer to the FH Series Catalog (Cat. No. Q197) for details.

Note: Do not use this document to operate the Unit.
